

U.S. Serial No. 10/614,037

IN THE CLAIMS

Claims 1-33 (Canceled).

34. (Previously presented) A method of producing an immunogenic composition comprising a virus or a virus antigen, wherein the method comprises:

providing a culture of cells that have been grown in an animal protein free medium comprising soy hydrolysate at a concentration of about 0.05% (w/v) to about 1% (w/v) and yeast hydrolysate at a concentration of about 0.05% (w/v) to about 0.3% (w/v);

infecting the cells with the virus;

incubating the infected cells to propagate the virus;

harvesting the virus or virus antigen produced

prepare an immunogenic composition from the harvested virus or virus antigen.

35. (Previously presented) The method according to claim 34, wherein said harvested virus or virus antigen is subjected to purification.

36. (Previously presented) A method of producing an immunogenic composition comprising a virus or a virus antigen, wherein the method comprises:

providing a culture of mammalian cells, wherein the cells are selected from the group of monkey kidney cells, bovine kidney cells, dog kidney cells, pig kidney cells, mouse kidney cells, rat kidney cells, sheep kidney cells, hamster kidney cells and human cells that have been grown in an animal protein free culture medium comprising a soy hydrolysate and a yeast hydrolysate;

infecting the cells with a virus selected from the group of orthomyxoviruses, paramyxoviruses, reoviruses, picornaviruses, flaviviruses, arenaviruses, herpesviruses, poxviruses, coronaviruses and adenoviruses;

incubating the culture of cells to propagate the virus;

U.S. Serial No. 10/614,037

harvesting the virus or virus antigen so produced; and
preparing an immunogenic composition from the harvested virus or virus antigen.

Claims 37-45 (Canceled).

46. (New) The method according to claim 34, wherein the cells are animal cells selected from the group consisting of insect cells, avian cells and mammalian cells.

47. (New) The method according to claim 46, wherein the animal cells are selected from the group consisting of BSC-1 cells, LLC-MK cells, CV-1 cells, COS-cells, VERO cells, MDBK cells, MDCK cells, CRFK cells, RAF cells, RK-cells, TCMK-1 cells, LLC-PK cells, PK15 cells, LLC-RK cells, MDOK cells, BHK-21 cells, CHO cells, NS-1 cells, MRC-5 cells, WI-38 cells, BHK cells, and RK-cells.

48. (New) The method according to claim 34, wherein the virus that infects the cells is selected from the group consisting of orthomyxoviruses, paramyxoviruses, reoviruses, picornaviruses, flaviviruses, arenaviruses, herpesviruses, poxviruses, coronaviruses and adenoviruses.
